

## **COURSE INTRODUCTION RUBBER TECHNOLOGY**

**2-day course, given by ERT B.V., Deventer, the Netherlands**

**OBJECTIVE:** To become familiar with the different types and grades of rubber, their properties, ingredients, processing techniques and applications. Rubber is very different relative to other materials like metals and plastics, with regard to their properties, applications and processing techniques. In general courses, rubber is only often limited part of the content.

**TARGET AUDIENCE:** This course is given on a level which is suitable for newcomers in the rubber processing industry, users and purchasers of rubber products, commercial employees, technicians, technical buyers, managers, etc. No special education, nor knowledge of rubber technology, is required to participate in this course.

**CONTENT:**

- What is rubber and what makes it special
- Types of rubber
- Ingredients
- Compounding and mixing
- Processing
- Applications
- Properties and testing
- Visit to the laboratory of ERT B.V. with demonstrations of mixing, vulcanization and testing
